

Medicare Preventive Services

Managing Medicare preventive services can be a challenge for any clinic. Having the right tools to recognize the beneficiaries that need preventive services and when they are due is essential.

Annual Wellness Visit

One Healthcare Solution **Annual Wellness Visit (AWV) program integrates** with existing EHR software to provide Medicare Beneficiary Management. Our tools manage the patient risk assessment, clinical intake, and provider review.

The **Patient's Risk Assessment** can be completed on any mobile device. An Intuitive interface that helps keep the patient engaged and allows for completing the risk assessment online or in the clinic.

The **Clinical Intake** is pre-filled with the patient's current clinical information. Clinical staff simply confirm the information with the patient without the need to keep re-entering medical data. The stand-up and go TUG and Mini-Cog are presented to the patient in a simple solution. This keeps staff on-time and helps them concentrate on the patients.

Provider Review gives a complete list of all information covered in the Risk Assessment and the Clinical Intake, at the same time allowing the provider to interact with the patients and their information.

With a **Complete Solution**, the AWV becomes a manageable process that helps doctors formulate personalized prevention plans for their patients.

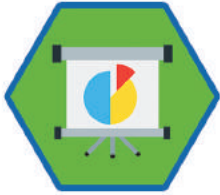

Our AWW Solutions

SMART-EHR integration

Our Annual Wellness Visit (AWV) program integrates with existing EHR software to provide Medicare Beneficiary Management. Our tools manage the patient risk assessment, clinical intake, and provider review.

Practice Analytics

Practice Analytics identify patients that need preventive care. Our intelligent analytics allow for criteria to be customized based on the needs of our customers. Dashboard identifies patients who are due for their AWV or IPPE.

User-Friendly, accessible on any device

The patient's risk assessment can be completed on any mobile device, with an intuitive interface that helps keep the patient engaged and allows for completing the risk assessment online or in the clinic. Also significantly reduces provider time for each AWV.

Patient-Centered Care Plan

Patient-specific care plans are based on each provider's protocols. Every disease has its own plans and goals.

Patient Health Card Portal

Integrated with Patient Health Card that allows patients to review their care-plans and clinical results.

Preventive Service Timeline

Preventive Services are scheduled and tracked to help keep patients healthy. This helps find problems early when treatment is most effective.
